Rating: 4.0 by 1 customers Soil And Water Conservation Engineering by Gary R. Edell Soil And Water Conservation Engineering encompasses the practical and applied aspects of the design, construction, operation, and maintenance of soil, water, and related resource conservation systems and their effects on the environment. Soil And Water Conservation Engineering: Systems and Methods covers: (1) design, construction, and operation of systems for the storage and/or removal of soil and water in the vicinity of residential, commercial, and industrial sites; (2) design, construction, and operation of systems for the storage and/or removal of soil and water in areas subject to flash floods, seawater inundation, and saltwater intrusion; (3) design, construction, and operation of systems for the storage and/or removal of soil and water for land treatment and land reclamation; (4) design, construction, and operation of systems for the storage and/or removal of soil and water in soils that are either in danger of causing instability in buildings or prone to causing damage to buildings due to instability; (5) design, construction, and operation of systems for the storage and/or removal of soil and water in soils that are in danger of causing instability in roads or bridges or prone to causing damage to roads and bridges due to instability; and (6) design, construction, and operation of systems for the storage and/or removal of soil and water in soils that are in danger of causing instability in parking lots or prone to causing damage to parking lots due to instability. Soil And Water Conservation Engineering: Systems and Methods is intended for university students majoring in soil and water conservation engineering and related fields, or for professional engineers involved in environmental engineering. Table of Contents Chapter 1 Preface 1.1 Scope and General Principles 1.2 Definitions 1.3 Background 1.4 Principles and Models 1.5 Constraints and Assumptions 1.6 Approximations and Simplifications 1.7 Conclusions and Guidelines Chapter 2 Soil And Water Conservation 2.1 Crop Production in Saturated Soil 2.2 Conservation of Soil and Water 2.3 Environmental Concerns with Soil and Water Conservation 2.4 Soil And Water Conservation Engineering Chapter 3 Soil and Water Storage and Removal Systems 3.1 Design of a Soil and Water Storage
